EXPLORING THE DIGITAL LANDSCAPE: INTERDISCIPLINARY PERSPECTIVES

Monograph

*Edited by Olha Blaha
and Iryna Ostopolets*

The University of Technology in Katowice Press

2024

Editorial board :

*Zhanna Bogdan – PhD, Associate Professor,
Simon Kuznets Kharkiv National University of Economics (Ukraine)*
*Olha Blaha – PhD, Associate Professor, Ivano-Frankivsk Educational and Scientific
Law Institute of the National University «Odesa Law Academy» (Ukraine)*
*Nadiya Dubrovina – CSc., PhD, Associate Professor,
Bratislava University of Economics and Management (Slovakia)*
*Yuliana Irkhina – PhD, Associate Professor,
South Ukrainian National Pedagogical University named after K. D. Ushynsky (Ukraine)*
*Tamara Makarenko – PhD, Associate Professor,
Berdyansk State Pedagogical University (Ukraine)*
*Tetyana Nestorenko – Professor AS, PhD, Academy of Silesia,
Associate Professor, Berdyansk State Pedagogical University (Ukraine)*
Aleksander Ostenda – Professor AS, PhD, Academy of Silesia
*Iryna Ostopolets – PhD, Associate Professor,
Bogdan Khmelnytsky Melitopol State Pedagogical University (Ukraine)*

Scientific reviewers :

Antonina Kalinichenko – DSc, Professor, University of Opole
Oleksandr Nestorenko – PhD, Academy of Silesia
Iryna Yemchenko – DSc, Professor, Lviv Polytechnic National University, Ukraine

The authors bear full responsible for the text, data, quotations, and illustrations.

TABLE OF CONTENTS

Preface	9
Part 1. Interdisciplinary insights into modern digitalization and management	12
1.1. Digitalization and management of the modern educational process..... <i>Natalia Bobro</i>	12
1.2. Lviv Medical University’s architectural complex: a historical perspective on its establishment and development..... <i>Nataiia Bozhko, Olha Tsubova</i>	24
1.3. Control software by electronic load of the household..... <i>Vasyl Kot, Valentyna Yuskovych-Zhukovska</i>	37
1.4. Optimization of the stages of accepting administrative decisions to minimize the impact of uncertainty..... <i>Igor Shaforenko, Svitlana Zaika</i>	50
1.5. Remote work: analysis of the essence and strategic significance..... <i>Sviatoslav Shaforenko, Svitlana Zaika</i>	63
1.6. Pedagogical prognostication of formation of innovative and entrepreneurial competence in future managers of education..... <i>Iryna Shumilova, Nataliia Hrechanyk, Serhii Kubitskyi</i>	77
1.7. Information technologies as a driver of tourism business development..... <i>Svitlana Zaika, Andriy Avriata</i>	87
1.8. Information privacy: threats and challenges in the conditions of hybrid war in Ukraine..... <i>Iryna Hrabovets, Liudmyla Kalashnikova, Liudmyla Chernous</i>	100
1.9. The essence of the concept «choreographic projects» in the media industry social-humanitarian dimensions..... <i>Serhii Kachurynets</i>	111
1.10. Cross-cultural communication: Ukrainian-Polish informational-educational connections..... <i>Tetiana Koliada-Berezovska, Stanislav Berezovsky</i>	123
1.11. Electronic evidence in the criminal process of Ukraine..... <i>Hanna Stepanova</i>	134
1.12. The music of the Ukrainian composer V. Bibik in the global information space of the 21st century..... <i>Liutsiia Tsyhaniuk</i>	157

Part 2. Advancing education in the digital age: insights and strategies.....	169
2.1. A competent approach to the information security digital skills formation in the educational environment.....	169
<i>Alina Chaikina</i>	
2.2. European strategy «Open Science» as a driver of innovation in the information society.....	182
<i>Vasyl Levkulych, Oksana Petriv, Mykola Yehupov</i>	
2.3. Quality assessment of blended language learning courses: a practical case.	190
<i>Liudmyla Zagoruiko, Yevhen Plotnikov, Iryna Didenko</i>	
2.4. Transformation of the education system in preparation for the «Digital Era».....	200
<i>Viktor Zinchenko, Tetiana Bilan, Nataliia Vynnyk</i>	
2.5. Psychological features of the adaptation of Ukrainian adolescents to learning conditions in a foreign school.....	211
<i>Natalia Afanasieva, Natalya Byelyayeva, Viktoria Shkoda</i>	
2.6. Theoretical justification of soft skills development of youth students.....	224
<i>Zhanna Bogdan</i>	
2.7. Optimization of the process of adaptation of visually impaired persons to life in war conditions: empirical dimension.....	239
<i>Oksana Davydova</i>	
2.8. Psychologist communicative competence as a condition for his efficiency in the realities of the information society.....	252
<i>Marina Zaushnikova, Liubov Dolynska, Yulia Tonkopei</i>	
2.9. Use of software environments of simulation for the information society development.....	265
<i>Olexiy Os'machko, Roman Maiboroda, Eduard Shchokolov</i>	
2.10. Multidisciplinary approach to pharmaceutical management and marketing teaching.....	276
<i>Oleh Samborskyi</i>	
2.11. Application of innovative methods in English language lessons as an educational component of the information society development.....	285
<i>Svitlana Sechka, Maryna Kushnarova</i>	
2.12. Physics simulations as a tool for forming the research competence of students in the process of learning physics.....	294
<i>Yehor Sypchuk</i>	
2.13. Psychological factors of procrastination in students.....	305
<i>Iryna Ushakova, Bohdan Liashenko, Anastasia Mahonina</i>	

2.14. Formation of environmental competence of labor education future teacher in the higher teaching school.....	320
<i>Iryna Shymkova, Svitlana Tsvilyk, Vitalii Hlukhaniuk</i>	
2.15. Tests as a modern knowledge assessment technology.....	333
<i>Olha Yuzyk, Sergiy Veyna, Halyna Bilanych</i>	

Part 3. Navigating the digital frontier: innovations in management and economy.....	347
3.1. Digital assets as a tool for financial assets management in the digital economy.....	347
<i>Olena Chukurna, Olena Stanislavyk, Olena Radius</i>	
3.2. Reshaping management infrastructure in the digital financial frontier.....	362
<i>Artem Koldovskiy, Kateryna Shafranova</i>	
3.3. Digital technologies application for environmental safety management of waste treatment process during emergency situations.....	382
<i>Volodymyr Koloskov</i>	
3.4. Smart – concept of regional policy of spatial development in conditions of digitalization.....	396
<i>Olha Komelina, Inna Miniailenko</i>	
3.5. Exploring the startup ecosystem’s vibrant growth: lessons learned from the advanced economies.....	412
<i>Olha Komelina, Mariana Vasylchenko</i>	
3.6. Historical museums in innovative tourism activities in Ukraine.....	424
<i>Tetiana Lysiuk</i>	
3.7. Assessment of the influence of factors on the formation and improvement of quality and competitiveness of products of industrial enterprises.....	436
<i>Inna Vlasenko</i>	
3.8. Breaking social anxiety – green light for nuclear power plants.....	457
<i>Wladyslaw Wornalkiewicz</i>	
3.9. Carbon-nuclear transformation.....	478
<i>Wladyslaw Wornalkiewicz</i>	
3.10. Features of using Amazon Web Services as digital tools of modern business.....	499
<i>Liudmyla Halan, Evgeniya Borysevych</i>	
3.11. Innovative technologies of digital management of the tourist enterprise...	517
<i>Oleksandr Hladkyi, Tetiana Dupliak, Mikael Hashimov</i>	

3.12. Banking business management in the conditions of digital transformation of the economy.....	529
<i>Liudmyla Zveruk, Anna Monzolevska</i>	
3.13. Digital technologies in the green economy.....	544
<i>Olha Komelina, Sveta Shcherbinina</i>	
3.14. Formation features of Ukraine's digital economy in modern conditions...	556
<i>Svitlana Kulakova, Oksana Zhytnyk</i>	
3.15. Forming a strategy of investment and innovation development of enterprise in the information society.....	568
<i>Maryna Mashchenko, Olha Haponenko, Iryna Lisna</i>	
3.16. Overview of the modeling approaches of the technical condition of used building structures under force, deformation and high-temperature influences.....	582
<i>Andrii Romin, Nina Rashkevich, Yurii Otrosh</i>	
3.17. Analysis of the current state of digital transformation of business processes in business activities of Ukraine.....	593
<i>Olha Rudachenko, Vitalina Konenko</i>	
3.18. Digital economy and its significance for the development of modern innovative society.....	606
<i>Alexander Sklyarenko</i>	
3.19. Management of life activities of territorial communities under the conditions of marital state.....	616
<i>Leonid Tsubov, Oresta Shcherban</i>	
3.20. Financial technologies development and their role in improving of financial inclusion in the digital economy.....	628
<i>Olena Shevchenko, Svitlana Shcherbinina</i>	
Part 4. Innovative approaches in digital healthcare and rehabilitation.....	642
4.1. Using experience of physical therapy tools for rheumatoid arthritis.....	642
<i>Anastasiia Bondarenko, Tetiana Buhaienko</i>	
4.2. The correction of memory index of six-age children with a delay of mental development with the help of physical training.....	650
<i>Svitlana Gvozdetska</i>	
4.3. The path to digitalization in medical applications: analysis, problems and perspectives.....	662
<i>Viktoriia Horoshko, Andrii Horoshko, Oksana Hordiienko</i>	

4.4. Development of an instrument for assessment of activities of day living / instrumental activities of day living (IADL / ADL) for visually impaired and blind persons.....	677
<i>Yana Kopytina</i>	
4.5. Methodological principles of forming the information and digital culture of future specialists in the field of physical culture and sports.....	692
<i>Serhii Lazorenko, Yurii Kurnyshev, Tetiana Kozhemiako</i>	
4.6. Application of art therapy with the help of video information tools in the rehabilitation of post-stroke patients.....	706
<i>Vitalina Lytvynenko, Natalia Kuksa, Yulia Maliarova</i>	
4.7. Features of physical therapy for people with post-traumatic gonarthrosis in the post-acute period of rehabilitation.....	721
<i>Oleksandr Mishchenko, Tetiana Buhaienko, Olena Vaida</i>	
4.8. Segmental and reflex massage in the physical rehabilitation of patients with cervical osteochondrosis.....	731
<i>Mariya Nutrichina, Jevgenija Nevedomsjka</i>	
4.9. Use of virtual technologies in the training of doctors at the post-graduate stage of education.....	743
<i>Oksana Polianska, Igor Polyanskyi, Olha Hulaha, Inna Moskaliuk</i>	
4.10. Telerehabilitation of patients with acute cerebrovascular accident in the long-term rehabilitation period.....	752
<i>Anna Rudenko, Oleksandr Zvirniak, Anastasiia Syvachenko</i>	
4.11. Social and psychological adaptation of children with special educational needs in the process of informatization of modern society.....	770
<i>Iryna Skrypka, Inna Kravchenko</i>	

Part 5. Artificial intelligence and innovative educational approaches in digital society..... 782

5.1. Preparation of future specialists for a career in youth entrepreneurship: realities and perspectives.....	782
<i>Liudmyla Bazyl, Valerii Orlov, Tetyana Nestorenko</i>	
5.2. Professional development of vocational teachers in the context of society digitalization.....	796
<i>Liudmyla Bazyl, Valerii Orlov, Mykola Pryhodii</i>	
5.3. The concept of college teacher's professional competence development....	819
<i>Olena Titova, Petro Luzan, Iryna Mosia</i>	
5.4. Peculiarities of using artificial intelligence in the processes of training and evaluation of web programmers in it companies.....	830
<i>Oleg Bogut, Valentyna Yuskovych-Zhukovska</i>	

5.5. The significance of school geographic education in Ukraine for the «green» transition.....	842
<i>Tetiana Karpenko, Olena Lakomova, Daria Shiyan</i>	
5.6. Ecological safety of transport as a component of national security of Ukraine during armed aggression and as a prerequisite for a «green» transition during post-war reconstruction.....	853
<i>Oleksandr Kondratenko, Olha Lytvynenko</i>	
5.7. Modern computer vision technologies.....	870
<i>Oleksandr Sheremet, Valentyna Yuskovych-Zhukovska</i>	
5.8. The influence of artificial intelligence on the digitalization of society.....	881
<i>Valentyna Yuskovych-Zhukovska, Yurii Lotiuk</i>	
5.9. Trend of application of AI in search engines.....	892
<i>Wladyslaw Wornalkiewicz</i>	
5.10. Methodological approaches to the formation of information security in the conditions of information warfare.....	907
<i>Vyacheslav Borisov, Iryna Lapshina, Svitlana Lupinovych</i>	
5.11. Training of students majoring in elementary education for the formation of information security of elementary school students in the conditions of information warfare.....	933
<i>Vyacheslav Borisov, Iryna Lapshina, Svitlana Lupinovych</i>	
5.12. Technological aspects of professional competence development of college teachers.....	956
<i>Tetiana Pashchenko, Anna Ostapenko, Oleksandr Yamkovi</i>	
5.13. Preparation of vocational education teachers for activities in the conditions of digital transformation of education.....	969
<i>Mykola Pryhodi, Andrii Hurzhii, Oleksandr Humennyi</i>	
5.14. Development of the innovative competence of teachers in vocational education institutions in the conditions of the digital transformation of society.....	981
<i>Valentyna Radkevych</i>	
5.15. Implementation of the educational component «Green technologies of urban ecosystems» in the educational process.....	994
<i>Olena Sierikova</i>	
5.16. Use of unmanned aircraft by fire and rescue departments of Ukraine.....	1006
<i>Serhii Shevchenko</i>	
Annotation.....	1022

5.8. The influence of artificial intelligence on the digitalization of society

The digitization process involves converting text, graphic, audio, and video information into a digital format for use with modern gadgets. Modern computers, laptops, MacBooks, smartphones, and tablets allow you to digitize any information.

Digitization contributes to the transformation of all government and commercial services into convenient online services. This, in turn, promotes digital transformation in education, healthcare, management, finance and banking, industry, everyday life, etc. Assistant robots during operations, virtual assistants of medical staff, personnel management are confidently entering our lives.

In Ukraine state policy in the areas of digitalization, digital development, digital economy, digital innovations, development of digital skills and digital rights of citizens is implemented by the Ministry of Digital Transformation (Ministry of Digital Transformation).

Digital computers' computer technologies are effectively and rapidly introduced into various spheres of human life. Artificial intelligence technologies are actively considered as an auxiliary tool for professional, educational, and scientific activities.

Artificial intelligence is considered a new direction of scientific research in the field of computer science, which is engaged in the development of intelligent computer systems. Such systems have capabilities that connect with the human mind, namely: understanding of language, learning, the ability to reason, solve problems.

With current trends require the use of artificial intelligence systems in corporate applications – CRM sales management systems (Customer Relationship Management), enterprise resource management systems ERP (Enterprise Resource Planning): production, personnel management, finance, logistics processes, etc.

The rapid and dynamic development of artificial intelligence technologies is based on the achievements of other innovative fields of science, such as neural networks, machine learning, natural language processing, algorithmizing of deep learning and customer-oriented processes. Compiling new machines and deep learning algorithms allows for significant expansion capabilities of machines

in solving complex tasks and to ensure higher accuracy of provided forecasts and more accurate diagnosis. In addition, today, a simple artificial intelligence tool – ChatGPT – is widely used to solve various tasks in various fields, including education, hotel business, marketing and advertising, and real estate operations. The popularity of ChatGPT confirms the significant influence of artificial intelligence on the worldview.

In our time, the amount of information that needs to be collected, stored, processed, analyzed and made informed decisions has increased significantly. The processing of extremely large volumes of data can be more effective precisely with the use of artificial intelligence technologies, as it is aimed at optimizing time-consuming tasks.

Decree of the Cabinet of Ministers of Ukraine dated 02. 12. 2020 No. 1556-r «On the approval of the Concept of the development of artificial intelligence in Ukraine» defines the priority areas in which the tasks of the state policy of the development of the field of artificial intelligence are implemented: science, information security, cyber security, justice, economy, legal regulation and ethics, education, defense, public administration (КабМін, 2020).

Among the modern technologies of artificial intelligence, the following should be noted, which are most often used in business processes:

- artificial intelligence control systems,
- intelligent applications,
- machine learning,
- chat bots,
- enhanced intelligence (augmented intelligence).

Companies can take advantage of artificial intelligence to adapt to their business processes, e-commerce, and digital market conditions, to provide consumers and customers with recommendations on the Internet about their products. Therefore, artificial intelligence can become a promising tool for ensuring competitive advantages in the modern market.

Research predicts that the global AI market could reach \$1.35 trillion by 2030, reflecting the rapid growth of AI adoption in all industries. According to IBM, the global adoption rate of artificial intelligence technologies by 2023 was 39%, which is 4 percentage points higher than the previous year (Митник, 2024).

The Ministry of Digitization has developed a Roadmap for the regulation of artificial intelligence in Ukraine. The purpose of the Roadmap is to build the brand of Ukraine as a digital state in the field of artificial intelligence. Ukraine will also have to implement the AI Act of the European Union as one of the conditions of European integration in the digital sphere. The use of artificial intelligence in Ukraine is planned in various spheres of activity.

In addition, the Ministry of Statistics is developing a virtual assistant in Diya. The task of a virtual assistant is to quickly find answers to users' questions. It is also planned that artificial intelligence will help the State Statistics Service of Ukraine to process and analyze data.

«Diya» portal is a website of public services in Ukraine. Diya is a mobile application, web portal and brand of the digital state in Ukraine, developed by the Ministry of Digital Transformation of Ukraine. The action was first presented in 2019 and officially launched in 2020.

Action provides public services online. The most popular automated services are the following (Мінцифри, 2024):

- signing documents using a digital signature (the service is provided in three minutes);
- obtaining a certificate from the State Register of Individuals about paid incomes and taxes withheld from them (the service is provided in three minutes);
- preparation of documents for participation in the program «Provision of subsidized mortgage loans to internally displaced persons» (the term of providing the service is one working day);
- automated registration without the participation of the state registrar of a natural person by a private entrepreneur, while it is possible to immediately

choose a general or simplified taxation system (submission of an application takes up to a minute, registration takes place in one minute);

- generation of an international COVID vaccination certificate with a QR code for yourself, if the correct data is entered in the register (submitting a request takes less than a minute, the term of providing the service is up to 10 minutes);

- obtaining the status of unemployed and submitting an application for unemployment benefits (submission of the application takes up to 5 minutes, processing of the application takes up to three working days);

- a simplified application form can be submitted by internally displaced persons and persons from temporarily occupied territories and territories where hostilities are taking place, in which property and documents necessary for registration as unemployed have been destroyed;

- on the basis of an automated application, stop the registration of the unemployed status (submission of the message takes about one minute);

- notification of damage or destruction of one's real estate as a result of the military aggression of the Russian Federation for the purpose of assessment and compensation of property damage caused by the aggressor (submitting a notification within five minutes);

- filing an application for obtaining a grant for the creation or development of a processing enterprise to support business and create new jobs (submission of the application takes up to twenty minutes);

- drawing up an application for obtaining a grant for the development of greenhouse farming to support business and create new jobs (submission of the application takes up to twenty minutes, processing within fifteen working days);

- drawing up an application for obtaining a grant for the development of one's own horticulture, berry growing and viticulture to support business and create new jobs (submission of the application takes up to twenty minutes, processing of the application within fifteen working days);

- filing an application for a grant to create or develop your own business to support your own business and create new jobs (submitting an application takes up to twenty minutes, processing in stages);

- the application for a grant for veterans and their family members, the allocated funding will enable everyone who has a business plan, the necessary skills and desire to start their own business (submission of the application takes up to twenty minutes, processing is phased).

- you can send an online application for marriage registration in the state registration department of civil status acts (submitting the application takes up to ten minutes, providing the service in one working day).

Most online services are provided by the state for free. The action is called the state in the smartphone. A state in the center of which is a person.

IN you can get electronic court decisions in the «Action» application. It displays the outcome of the court case. The document has the same legal force as a paper counterpart. The electronic version is used in many life situations. In particular, the document can be submitted to the State Registry of Civil Status to confirm the dissolution of marriage, present to the notary for the opening of the inheritance, etc. Electronic court decisions are part of the global digitalization of the judicial system of Ukraine,

Through the «Action» application, you can pay fines for violations of traffic rules, issued with the help of cameras for automatic video recording of violations. As soon as the cameras detect a traffic violation on the road, a push notification is sent to the smartphone, the car owner can pay the fine in a few clicks and avoid administrative liability.

In the application, pensioners' certificates for various types of pensions, tickets of students of higher education institutions, ID cards (passports), driver's licenses, birth certificates, marriage certificates, death certificates, etc., almost most of the necessary legal documents, are available.

In the «Action» application, various life events and situations are provided, explained in It is important to know where to go and how to act in case of expected or unexpected events and situations.

For the application and the portal to work stably, for the security of personal data of users, the state protects all its basic registers in cyberspace.

So, already today you can get government services online, which are listed in Table 1.

Table 1. Government services online

	State service	Content of the state service online
1.	Electronic work	the opportunity to apply for grants for the development of small and medium-sized businesses
2.	Pensions, benefits, and assistance	the opportunity to receive services related to receiving and transferring a pension, receiving benefits, or receiving assistance
3.	Family	the opportunity to use services at the birth of a child, there are services available for large families and in case someone decides to adopt a child
4.	Licenses and permits	licenses for fire-fighting activities, permits for construction works, certificate of acceptance of the facility into operation, issuance of permits for road transportation services
5.	Security and law and order	obtaining a certificate on the absence of a criminal record, viewing a map of checkpoints, or filing a claim with the court
6.	Transport	the opportunity to receive services related to driver's documents
7.	Land, construction, real estate	issuing permits for the start of construction, obtaining land management services, providing the necessary certificates or extracts, recommendations of the necessary specialists
8.	References and extracts	obtaining certificates and extracts for all occasions in life - pension, security, transport, taxes, health, or construction, obtaining any certificate in one place
9.	Environment	submitting a declaration on hazardous waste, issuing a permit for special water use
10.	Health	given the opportunity to create adult and child COVID certificates about vaccination, about a negative PCR test and about recovery from COVID-19
11.	Documents and citizenship	obtaining documents of a citizen of Ukraine, registration of citizenship, registration for elections, access to a personal account in the voter register
12.	Entrepreneurship	creation, amendment or termination of one's own business and service of signing registration documents

Let's consider the register of administrative services that can be obtained in the «Action» application, reflected in Table 2.

Table 2. Register of administrative services

№	Administrative service	Content of the administrative service online
1.	Protection of citizens during wartime	all about assistance from the state for internally displaced persons and victims of a full-scale war
2.	Social Protection	all information about the assignment of social assistance to socially vulnerable categories of citizens, pension services, guardianship, and care
3.	To war veterans	services for combatants, persons with disabilities because of the war, victims of the Revolution of Dignity and family members of fallen war veterans, defenders of Ukraine
4.	Construction and real estate	all services related to real estate
5.	Citizenship and migration	everything about passport services, registration of acts of civil status or place of residence
6.	Agriculture	all agricultural services
7.	Transport	everything about transportation, obtaining a transportation permit, driver's license, or registration (re-registration) of vehicles
8.	Life Safety	services with sanitary and epidemiological well-being, man-made and fire safety or with objects of increased danger
9.	Earth and ecology	services related to land use, subsoil use, water use or environmental safety
10.	Intellectual Property	all about services related to copyright and related rights, patent law
11.	Foreign economic activity	services related to import and export of goods, transit, as well as customs procedures
12.	Protection and security	services related to protection and security activities
13.	Activities of business and public organizations	services related to the registration of businesses and public organizations
14.	Professional activity	services that are necessary for engaging in professional activities
15.	Production and circulation of certain types of products	services related to the production and circulation of certain types of products, such as tobacco products, alcoholic beverages, fuel, medicinal or narcotic products, food products
16.	Informatization, space and electronic trust services	services related to telecommunications or space activities, information resources and electronic trust services
17.	Finance and taxes	financial, tax or securities related services
18.	Fuel and energy complex and water supply	services related to water supply and drainage, fuel, oil and gas or energy and energy conservation
19.	Education, sports and tourism, culture, and religion	services related to educational activities, tourism, physical culture and sports or cultural heritage sites and religious activities

Currently, the Ministry of Digitization is creating a virtual assistant based on artificial intelligence in the «Action» application. At the request of users in the state language, the chatbot with artificial intelligence will provide the voice services indicated in Tables 1 and 2.

The new chatbot will be called «Nadia» and will help not only answer users' requests, but also help solve their problems.

«Nadia» will be a new generation chatbot that will communicate in «human language». In this way, it can quickly and qualitatively answer the questions of users of the «Action» application. The main goal of creating Hope is to save the time and resources of the «Diya» technical support team.

During beta testing, users will be able to teach «Nadia» to respond more effectively to various requests (Пасічний, 2024).

Thus, artificial intelligence is gradually integrated into various spheres of society and significantly transforms them. In Ukraine and other countries, work is underway to introduce artificial intelligence into the education system.

An important advantage of artificial intelligence over human intelligence is unlimited repetitive tasks. At the same time, artificial intelligence never gets tired, makes mistakes, and never makes mistakes. Therefore, automation and implementation of artificial intelligence in repetitive requests and responses can replace officials, reduce the number of human errors and free up the time of employees for the same type of work, create conditions for creative work.

Starting from 2017, the market for virtual assistants is in a state of active development: interest is reviving both from the side of users and from the side of large companies. As a result, the functionality of assistants is constantly expanding, virtual assistants are part of mobile operating systems, and separate «smart» devices with an emphasis on voice interaction are entering the market.

Using the keyboard requires the user to be constantly in front of the display, and the voice interface eliminates the need to constantly interact with the keyboard.

At the core of such voice services are artificial intelligence and machine learning technologies that help them perform many tasks quickly and efficiently.

Virtual assistants, thanks to their high performance and multifunctionality, immediately gained popularity. Today, a wide selection of virtual assistants is available to users. Each of them has its own characteristics and advantages. The most popular such universal programs are Google Assistant from Google, Alexa from Amazon, and Siri from Apple. In the basis of the computer' of computer programs is a model of natural language processing (Natural Language Processing, NLP), which allows it to recognize voice commands (Андреев, 2024).

As you can see, these virtual voice assistants are developed by leaders in the field of IT – the world's largest technology companies, each of which has its own specifics and advantages.

With the help of Cortana – a virtual voice assistant with elements artificial intelligence for Windows, the user can dictate documents and e-mails in basic applications, launch and switch between them, manage the operating system, format documents, save documents, edit files, efficiently correct errors and fill out forms on the Internet.

It is advisable to choose the virtual assistant Google Assistant if you use devices from Google or with Android OS, and Siri – if you use software and hardware from Apple. Amazon Alexa offers today the best solution for integration with «smart» home systems, the Internet of Things. Alexa for Business is designed for enterprise administration, providing voice recognition to control the workplace and applications.

One of the key functions of modern VAs (virtual assistants) is the ability not only to recognize and process voice commands or questions, but also to respond to them using a voice synthesizer. New AI technologies significantly expand the capabilities of such programs with self-learning algorithms that make them more efficient and personalized. For example, the best virtual assistant can remember the user's preferences, most often used commands or questions or other data (Андреев, 2024).

Digitization is one of the main factors in the growth of the world economy in the next 5-10 years. In addition to the direct productivity gains that companies get from digital technologies, there is a chain of indirect benefits of digitalization, such

as saving time, creating new demand for new goods and services, new quality, and value, and more.

Digital technologies: Internet of Things, robotics and cyber systems, artificial intelligence, big data, paperless technologies, additive technologies (3D printing), cloud and fog computing, unmanned and mobile technologies, biometric, quantum technologies, identification technologies, blockchain, etc.

Everyone is a consumer of digital technologies – the state, business, citizens. A digital society is a society that intensively and productively uses digital technologies for its own needs (self-realization, work, recreation, education, leisure of everyone), as well as for the achievement and implementation of common economic, social, and public goals (Фіщук та ін., 2024).

The use of artificial intelligence is spreading to more and more spheres and branches of the economy. The number of companies using artificial intelligence to one degree, or another is growing exponentially. Countries are developing national strategies for artificial intelligence, defining ethical norms and limits of use.

Today, artificial intelligence combines many technologies, the main of which are machine learning (machine learning), computer vision (computer vision), deep learning (deep learning) and natural language processing (NLP) (Фіщук та ін., 2024).

Artificial intelligence based on the processing of large data samples makes it possible to optimize processes and improve the quality of digital products and services.

Accelerated automation of production processes, robotics, and the introduction of artificial intelligence technologies into business processes have given a powerful impetus to numerous innovations. For example, there are self-driving cars that use a combination of computer vision cameras, sensors, and artificial intelligence algorithms.

Using artificial intelligence to control smart things AIoT – artificial intelligence of things, «artificial intelligence of things» combines the capabilities of artificial intelligence and IoT, so it can find application in almost all areas of human activity. Artificial intelligence of things can be learned by collecting information that

it receives from users of the system or by performing their tasks. Such technologies include machine learning, natural speech processing, voice, and face recognition.

Artificial intelligence models learn from the answers and information they receive from the experts who train them. Content is automatically generated by an algorithm, so artificial intelligence is a toolkit for voice interface innovation and optimization. Digitization of business processes in society, creation of digital products, online services and provision of virtual services accelerates the digitization of society.

Thus, artificial intelligence can be used to create unique useful products and services that are fully adapted to the user's preferences. This has a positive effect on the processes of digitalization of society.
